ROME

Women and Ruins: Archaeology, Photography, and Landscape

celebrates women explorers, archeologists, and travelers from the early 1900s who adopted to the camera to document excavations that were yielding major new discoveries about antiquity and the radical transformations of Italy in the period. The Academy brings to light the ways in which a cohort of American, British, and Italian women used photography as a tool for understanding both the ancient past and for interpreting the social and political transformations of their times.
